Generators require periodic maintenance in order to keep them ready to perform. The following is an outline of services performed and a price agreement that will set you up for regularly scheduled visits. Our *Generator Service Program* includes two annual visits that cover a comprehensive inspection of the system. The inspection covers start up, required servicing, but not repairs outside of warranty. A 10% discount is given on additional service and repairs for our *Generator Service Program* members.

<u>Make</u>	<u>Mode#</u>	<u>Oil/Oil Filter</u>	<u>Battery</u>
<u>KW</u>	<u>Serial#</u>	<u>Air Filter</u>	<u>Other/Notes:</u>

**MID YEAR SERVICE**

Check visually the ignition system	_____	Check/Clear air cooling intakes	_____
Check controller operation	_____	Visual check of transfer switch	_____
Check manual shut down for operation	_____	Provide check list of services	_____
Test run generator ensure load transfer	_____		

*Any repairs required will be by owner approval before work commences. Other services may be required periodically such as oil changes and filters if the unit is run for more than 50 hours annually. You should also check the water level in your battery in between maintenance. The water can tend to evaporate which can lead to a dead battery and costly repairs to your generator in the future.*
